

IoClean[®] Maxi Bar

ANION GENERATOR AGAINST AIRCONDITIONING DISEASE

IoClean[®] Maxi Bar is an anion generator very easy and effective to prevent bacteria and mould proliferation in the air conditioning system.

IoClean[®] Maxi Bar take advantage of the air ionization technology bases. The ionized air makes the unfavorable environment to the bacteria, in order to help preventing their proliferate.

Ionization helps also to reduce the tiny dust, because of this is retained in the UTA or Fan Coil filters.

IoClean[®] Maxi Bar is compatible with all air conditioning systems. Installation consist only in wiring the anion generator to the fan of the air conditioning system.

Technical Details

- Anion Generator: $7 \times 2 \times 10^6 / \text{cm}^3$
- Current supply 220V – 50 Hz
- AISI304 box
- Cable 2P length 500 mm
- Dimensions: 520*26*50 mm

Installation

Install in correspondence of the suction side of the air conditioning system, near the filter. Wiring the system to the fun.

Example:

UTA suction dimension = 50x50cm
Medium Obtained: 4.800 anion/cm³

Some Anion Value expressed in Anion/Cm³

AirConditioned Rooms/Yacht	0 – 250
Airplane	20 – 250
House with opened windows	250 – 500
City	250 – 750
Country	1.000 – 2.000
Mountain	1.000 – 5.000
Water Falls	25.000 – 50.000

**Bacteria
Mold
AirConditioning
Disease**

Ionization principle

Anion generators are devices able to get rich the air with anions generated submitting air at intense electromagnetic field. It has not antibacterial properties, but it is very effective against proliferation of bacteria and replication of microorganisms.

Anion generators if well installed, can be used to replace the correct ionization in the air in close spaces with air conditioning systems and or air recirculation systems. From many international health experts, this effect is considered very important.

Ionization has also the property to attract the fine dust and particulate in the standard filters that otherwise would pass through and it would generally cause asthmatic problems and allergy.
